

GROWING QUALITY BEE QUEENS

A. Mikelėnas

Summary. Every beekeeper is aware of the fact, that the efficiency of a bee family absolutely depends on the quality of the bee queen.

Two methods of growing bee queens have been compared. By the first method young eggs are transferred to artificial cells once, while by the second one they are transferred twice, thus making the worker bees to replenish the cells with bee milk. The weight gain of bee queen's grown by this method is 7,0 %.
