

TREATMENT OF COWS AFFECTED BY LATENT AND CLINICAL MASTITIS WITH DIVACCON PREPARATION

E. Aniulis, E. Valionis, V. Malakauskas

Summary. Thirty six cows ill with latent mastitis and fifty two ones effected by clinical mastitis have been treated. 69,4 percent latent and 71,2 percent clinical mastitis cases have been cured by means of 10,15,20 and 25 percent Divaccon solution. The course of treatment was controlled by an express method of diagnostics.
