

## ASPERGILOSIS OF PENGUINS IN KLAIPĖDA AQUARIUM

V. Citvaras, L. Varanauskas

**Summary.** Analysis of penguin welfare and feeding conditions in Klaipėda aquarium showed that in some cases they are not sufficiently observed. This results in the reduction of the immunity of the birds.

It has been found that reproduction of pathogenic fungi on various surfaces of the aquarium is one of the causes of aspergilosis infection of penguins.
