

## THE RESEARCH OF INTERRELATION OF ACID AND ALKALINE ELEMENTS IN SOME FEEDS

J. Kulpys, V. Juraitis

**Summary.** To maintain appropriate acid-alkaline level of cow metabolism it is important to balance a correct (0,6-0,9:1,0) relation of acid and alkaline elements in the ration. For this purpose the main cow feeds have been investigated at LVA Training Experimental Centre and optimal rations of correct acid-alkaline levels for pregnant-dry period cows have been recommended.
