

## ESTIMATION OF GERMAN AND DANISH BLACK-AND-WHITE BULLS' INHERITABILITY

J. Kuosa, J. A. Kirvela, V. Juozaitienė, M. Paleckaitis

**Summary.** Tests were carried out on German and Danish Black-and-white bulls' progeny possessing 73,3 % and 37,7 % Holstein blood. The tests indicated that the productivity of German Black-and-white bulls' progeny was insignificantly higher and fattening-meat qualities worse than those of Danish Black-and-whites.
