

USAGE OF FERMENTAL PREPARATION MIXTURE IN CALVES RATIONS

P. Matusevičius

Summary. The live weight of 1-4 month old calves, given 1,5-3,0 g of fermental preparation mixture, has increased by 13,5-16,3 kg or by 13,6-17,1 % compared with the calves in the control group. They have consumed 4,01-4,16 % less of fodder units per 1 kg of the gained weight. The usage of fermental preparation mixtures has resulted in an increase in digestibility of nutritious substances by 4,14-4,29 %.
