

## EFFECTIVENESS OF MULTI-ENZYME PREPARATION BIO-FEED® PLUS CT IN WHEAT BASED BROILER FATTENING RATIIONS

H. Jeroch and M. Schurz

**Summary.** The effectiveness of multi-enzyme preparation Bio-Feed® Plus CT has been estimated as a supplement (250 and 500 mg/kg feed) in wheat based feed mixtures (starter, fattener) for broiler chickens in three successive growth trials. Variety pure winter wheat (variety 'Mikon') was used immediately after harvesting and after having been stored for 15 and 42 weeks.

The wheat variety used contains 8 g soluble pentosans/kg dry matter. This is a rather low level. There were no enzyme effects at a high performance level. The use of fresh harvested wheat showed same performance results as the stored wheat.

**Keywords:** Broiler, Wheat, Pentosans, Feed enzymes, Fattening performance.
