Summary. The enzyme preparation MEK-CGAP used in the test increased the weight of calves until the age of 6 months by 8,6–3,3 %. The preparation improves the digestibility of all ration nutritional ingredients from 0,2 to 5,4 %. It had no noticeable effect upon the health of the calves. The results of our investigation show, that the profit on every litas spent on this preparation fed at the doses of 1,5–3 g per day averages at 11,8–2,3 litas.

Keywords: enzymes, calves, ration, digestibility, fodder, blood.
