

WEANED PIGS' REARING ACCORDING TO EU GENERAL TECHNOLOGY

A.Januškevičius, E.Paulauskas, L.Isodienė

Summary. The economic profitability of pigs could be increased significantly using new technologies, such as combining forages enriched with proteins vitamins and mineral matter. Usage of a well balanced ration that contains all nutriments in adequate amounts and in proper ratio the one to the other is of great importance. Rearing of pigs according to EU general technology by feeding dry coarse fodder containing 20 % of albumin - vitamin - mineral addition provides a more rapid weight gain with less expenditure of foods.

Keywords: combining foods, addition, barley, wheat, oats, pig, return.
