

## THE TREATMENT OF SUPPURATIVE WOUNDS

J.Lapienis, V.Zaras

**Summary.** We created the ointment to treat suppurative wounds infected for the treatment. The ointment contains (percentage): cigerol (20.0-25.0); 40 % solution of glucose (10.0-15.0); crystalline insulin (2.0-5.0); 5 % ascorbic acid (5.0-10.0); crystalline chimotripsin (1.0-3.0); anhydrous lanolin (40.0-50.0). This ointment was used to treat the infected - suppurative wounds of horses. Clinical observations, etiological and bacteriological investigations show that this ointment has antibacterial, dehydrative and repairable effect. When we used 17 applications of this ointment an average of treatment was 8.45 days, while the treatment of the similar wounds with other ointments usually takes 25.5 days.
