

## SUBTOTAL RESECTION OF CANINE PROSTATIC GLAND (COMPARISON OF THE TWO MOST FREQUENTLY USED METHODS)

Valdas Vaitkus, Sergej Samochvalov

**Summary.** The article represents the results of clinical assessment of 15 dogs with prostatic diseases, and evaluation of 8 dogs after partial prostatectomy. Prostatectomy was performed using 2 methods: fillet and subcapsular, the aim being to compare the effectiveness and postoperative histological evaluation of biopsies one and two weeks after surgery.

**Keywords:** Dogs, prostatic gland, surgical treatment.
